Samples were harvested on August 1, 2001 between 8 and 10 am. Samples were then dissected the same day. Seed coat (pellicle) tissue was separated from embryos and frozen immediately in liquid nitrogen and stored at -80C. A gram of sample was removed and ground to a fine powder in liquid nitrogen. Total RNA was extracted using the hot borate procedure. Poly A+ RNA was obtained using the Poly(A) Purist kit (Ambion). The cDNA Library was constructed using the SMART cDNA library was constructed using the SMART cDNA library was fooly in Paramary library was en masse evicted and plasmid DNA containing the cDNA library was isolated from the resultant bacterial population. Plasmid DNA was then transformed into ultra competent E coli cells (KI10 Gold; Stratagene). Transformants were plated out on Q-trays (2000 CEU/tray), picked using a Qbot and archived in 384
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1487

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an urease subunit polypeptide complex encoding sequence of the invention.	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	RGGRAGATTTTCCARCACTTCAAGCACATATTGATCCTGTGTTGTGGGTGAAATTRCR 60 	acttgitaatrctattattaattttaataattacttattatcatatatat	TTACTTATATTAAAAAAGTTAATAAAAAGTAACGAAATTAGGACTATAATCCCATTGCCTT 180 	Tadaatttaacacaaggagtaataggtgaactcacacccaaagagcaagaaaggtctt 240 	GTTATATTATGCGGGCGAAGTGGCTAGAAACGCGAAAGCAGGGCTTAAAGCTCAACCA 300 	accgaagccattgcttacattagtgcccatattatggacgaagcgcgccgtggaaaaa 360 	AACGGTTGCCCAGGTTATGGAAGAGTGCATGCACTTTTTGAAAAAAGAGGAAGGA	CGGGGTGGGTAATATGGTTCCCGATCTAGGTGTAQAAGCCACCTTTCCTGATGGTACGAA 480 	actigiaactgigaaltggcccatcgaaccagatgagcacttcaaagcgggggaggga	attiggticcartaagacatcgactcaaigcagcaaagaagtaaccgaactigaggt 600 	TACTAATGAAGGGCCTAAATCCTTGCATGTGGGTAGCCATTTCCACTTCTTGAAGCTAA 660 	CAAGGCACTAAAATTCGATGGTGAAAAGCCTATGGCAAAGGCCTAGATATTCCCTCTGG 720 	CAACACGCTACGCATTGGGGCAGGACAAACCCGCAAAGTGCAGTTGATTCCTCTTGGTGG 780 	CAGTAAAAAAGTGATTGGCATGAACGGGCTTGTGAATAACATCGCGGATGAACGCCATAA 840 	acataaagggcttgacaaggggaaatctcagggatttatcaagtaaggagactcccatga 900

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXY subunit of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   278
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis infections and in diagnostic tests to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        385

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis infections the licobacter felis infections are some convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     325

The invention relates to an isolated nucleic acid molecule conferring on Helicobacter bizzozeronii an ability to produce urease, where the nucleic acid molecule is a urease gene cluster comprising at least one urease cacessory gene. The nucleic acid molecule is a present one urease accessory gene. The nucleic acid molecule is chosen from ureA, ureB, ureF, ureG, ureH and ureI. The invention also relates to an isolated protein encoded by the nucleic acid, and a vaccine for preventing onset of disease in mammals infected by H. bizzozeronii comprising a nucleic acid and a carrier, and an isolated antibody or its binding portion raised against the nucleic acid. The nucleic acids, proteins and antibodies are useful for vaccinating mammals capinst onset of disease caused by infection of H. bizzozeronii, which involves administering the sequences. The sequences are useful for capinal and antiped, providing a nucleotide sequence as a probe in a nucleic acid involves providing a nucleotide sequence as a probe in a nucleic acid and detecting any reaction which indicates that H. bizzozeronii is present in the sample. This sequence represents the H. bizzozeronii is present in the sample. This sequence represents the H. bizzozeronii.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated nucleic acid molecule having urease gene cluster, and conferring on Helicobacter bizzozeronii ability to produce urease, useful as vaccine for preventing disease in mammals infected by H.bizzozeronii.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                422

To obtain pORV214, a genomic DNA library of CPM630 was screened with anti-felicobacter urease antibody. A 17 kb Sall fragment from an isolated clone was subcloned into pUCIB to give pSCP1. PCR primers (AAT44352-53) were used to amplify a 2.5 kb fragment from pSCP1, which was inserted into pET24+ to give pORV214. The vector was utilised in the prodn. of recombinant, enzymatically inactive, multimeric urease in B. coli transformants for use in vaccines to treat or prevent Helicobacter infection. (Updated on 16-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                  The sequence encodes urease UreA and UreB proteins, which are components of a novel immunogenic composition capable of inducing protective antibodies against Helicobacter infection. The composition may include the UreA or UreB proteins, a urease associated heat shock protein (AAR74338-39) or the UreI protein (AAR74340). The composition is used to prepare a vaccine for humans or animals, especially against H. pylori and H. felis. Antibodies against the proteins may be used for treating Helicobacter infection, and primers/probes to the DNA sequence may be used for detection of Helicobacter infection. (Updated on 25-MAR-2003 to

The urease gene can be used to design probes for detection of Helicobacter infection, or utilised in the prodn. of recombinant urease subunits for use in novel immunogenic compens. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                36.9%; Score 1062.6; DB 2; Length 2619; ilarity 65.5%; Pred.
